

Abstract

Title: Game Intellect Improvement for U13 and U14 Ice Hockey Players

Objectives: This work is focused on improving game intellect. It explains basic theoretic principles of game thinking proces and describing manners for improvement game intellect.

Methods: In my thesis I used an analythic method. First, I will analyse the psychical phenomena. I described them and explained them in separated chapters. Then I will introduce possibilities and resources, with which we could improve game intellect. I will describe these resources and graphically explain them in game exercises.

Results: After peruse of literature resources, I made a conclusion, that for improvement of game intellect, we need frequent repetition. The games should take the main part of the training session. Players will be better at game decisions. They will have more courage in risky game situations and then make creative solution.

Keywords: Psychical phenomena, games, game memory, game intellect
